AVERAGE DAILY TRAFFIC VOLUMES  
with VEHICLE CLASSIFICATION DATA  
on INTERSTATE, ARTERIAL and PRIMARY ROUTES

2000

**AVERAGE DAILY TRAFFIC VOLUMES  
with VEHICLE CLASSIFICATION DATA  
on INTERSTATE, ARTERIAL and PRIMARY ROUTES**

**2000**

Prepared By  
**Virginia Department of Transportation  
Traffic Engineering Division**

In Cooperation With  
**U.S. Department of Transportation  
Federal Highway Administration**

Virginia Department of Transportation  
Traffic Engineering Division  
Traffic Monitoring Section

The Virginia Department of Transportation (VDOT) conducts a program where traffic count data are gathered from sensors in or along streets and highways and other sources. From these data, estimates of the average number of vehicles that traveled each segment of road are calculated. VDOT periodically publishes booklets listing these estimates.

Three booklets are published annually. One of these booklets includes a list of all Interstate and Primary highway segments with the estimated Annual Average Daily Traffic (AADT). AADT is the total annual traffic estimate divided by the number of days in the year. This book is titled "Average Daily Traffic Volumes on Interstate, Arterial, and Primary Routes".

The second of these booklets includes the same information as the first, along with some additional information such as an estimate of the percentage of the AADT made up by 6 different vehicle types, ranging from cars to double trailer trucks. This second book also includes the estimated Annual Average Weekday Traffic (AAWDT) which is the number of vehicles estimated to have traveled the segment of highway during a 24 hour weekday averaged over the year; and a "Design Hour" estimate which is value used by planners to formulate design criteria. This book is titled "Average Daily Traffic Volumes with Vehicle Classification Data, on Interstate, Arterial, and Primary Routes".

The third is a booklet of summary charts providing information about the traffic volumes experienced in different areas or jurisdictions. This book is titled "Average Daily Vehicle Miles Traveled and other Summary Reports regarding Traffic Volumes on Virginia Highways." Relative Density of Traffic on Interstate, Arterial and Primary ". There are probably an infinite number of ways to present traffic volume summary information. Because the user determines the value of each presentation, the booklet has been redesigned based on user requests and feedback. The people at VDOT Traffic Engineering's Traffic Monitoring Section who produce these books welcome requests for other helpful ways of presenting the summary information.

In addition to the three annual publications, one hundred books are published periodically, one for each of 100 areas across the state defined by VDOT for record-keeping purposes. These books include traffic volume estimates for all roads within the county, cities, and towns within the area. These books are titled "Daily Traffic Volumes Including Vehicle Classification Estimates, where available; Jurisdiction Report numbers 00 through 99".

## **Publication Notes**

### **Parallel Roads**

For road inventory and management purposes, some roadways are counted separately by direction and have separately published traffic estimates for each direction of travel. Examples of such roadways are the interstate system and routes with separated facilities and (usually) one-way traffic in urban areas. In these publications, they are referred to as parallel roads. As a convenience for the users of the publication, the listing for segments of roads with parallel segments are published with both the traffic estimates for their own direction of travel (e.g. I-95 Northbound) as well as the estimate of the total of all traffic on the same route including parallel roadways (all directions of I-95). The publication will have a "Combined Traffic Estimates for Parallel Roadways on this Route" or "Combined Traffic" identifiers for the combined direction of travel estimates.

Roadways such as I-395 with a North segment, a South segment and a separate Reversible lane segment will have the estimate for more than two parallel roadways included in the entire combined traffic estimate.

Some routes will have very complicated paths through cities and towns and traffic, and these parallel relationships may be too complex to allow a relationship between nearby sections of the opposite direction on the same route. In this case, to indicate that the traffic estimates for such a road segment may not include all directions of traffic on that route, the line that lists the combined values will indicate "NA" for not available.

---

VDOT's traffic monitoring program includes more than 100,000 segments of roads and highways ranging from several mile sections of Interstate highways to very short sections of city streets. Due to problems experienced obtaining some traffic count data, and the level of quality necessary to maintain confidence in the data, no estimate is currently available for some segments of roadway. These segments are included in the publications indicating "NA" for not available. It is the intention of the VDOT's Traffic Engineering Traffic Monitoring group to obtain the data necessary and to report traffic volume estimates on all road segments included in these publications. Future publications will include traffic volume estimates for many of the segments without current information.

Many of the road segments in this program are local secondary roads. The amount and detail of data collected on these roads are not as great as the data collected on higher volume roads. The vehicle classification, average weekday traffic volumes, and the theoretical design hour traffic volumes are not calculated for these roads. The publications indicate "NA" for the information that is not available.

This publication is based on a new traffic monitoring program. Because the data collection techniques and statistical evaluation processes are different than those used in previous years, comparison with previous publications may be misleading.

**Glossary of Terms:**

**Jurisdiction:** The City, Town, or County at the beginning of the traffic link. Traffic links are normally terminated at each jurisdictional boundary.

**Length:** Length of the traffic segment in miles.

**AADT:** Annual Average Daily Traffic. The estimate of typical daily traffic on a road segment for all days of the week, Sunday through Saturday, over the period of one year.

**QA: Quality of AADT:**

- A Average of Complete Continuous Data
- B Average of Selected Continuous Count Data
- F Factored Short Term Traffic Count Data
- G Factored Short Term Traffic Count Data with Growth Element
- H Historical Estimate
- M Manual Uncounted Estimate
- O Provided By External Source
- R Raw Traffic Count, Unfactored

**4Tire:** Percentage of the traffic volume made up of motorcycles, passenger cars, vans and pickup trucks.

**Bus:** Percentage of the traffic volume made up of busses.

**2Axle Truck:** Percentage of the traffic volume made up of 2 axle single unit trucks (not including pickups and vans).

**3+Axle Truck:** Percentage of the traffic volume made up of single unit trucks with three or more axles.

**1Trail Truck:** Percentage of the traffic volume made up of units with a single trailer.

**2Trail Truck:** Percentage of the traffic volume made up of units with more than one trailer.

**QC: Quality of Classification Data:**

- A Average of Complete Continuous Data
- B Average of Selected Continuous Count Data
- C Short Term Classified Traffic Count
- F Factored Short Term Traffic Count Data
- H Historical Estimate
- M Mass Collective Average
- N Classification Estimates of Similar Neighboring Traffic Link

**Design Hour:** The estimate of the traffic volume for the 30<sup>th</sup> highest traffic volume occurring in a one year period.

**QK: Quality of the Design Hour estimate:**

- A 30th Highest Hour Observed During 12 Months of Continuous Traffic Data
- B 30th Highest Hour Observed During Less than 12 Months of Continuous Traffic Data
- F Factored Highest Hour Collected at in a 48 Hour Weekday Period
- G Factored Highest Hour Collected at in a 48 Hour Weekday Period with Growth Element
- M Manual Estimate of 30th Highest Hour
- N Design Hour of Similar Neighboring Traffic Link
- O Provided by External Source

**AAWDT: Average Annual Weekday Traffic.** The estimate of typical traffic over the period of one year for the days between Monday through Thursday.

**QW: Quality of AAWDT:**

- A Average calculated from Complete Continuous Data
- B Average calculated from Selected Continuous Data
- F AAWDT Calculated from Short Term Traffic Data with Factors
- M Manual Uncounted Estimate
- N AAWDT of Similar Neighboring Traffic Link
- O Provided by External Source

## Route Shield Legend

### Route Systems

- North  
 Interstate Route Traffic volume data for interstate Routes and some other routes are reported separately by direction, as well as combined.
-  US Route
-  Virginia State Route
-  Secondary Route

### Special Routes

- Bus  
 Bus - Business Route
-  Bypass - Bypass Route
-  Truck - Truck Route
- ALT  
 ALT - Alternate Route
-  Wye - Wye Route connector
-  P - Parallel Route; Southbound or Westbound direction lanes of a numbered route where they are on a different road facility than the other direction.
-  The VDOT Maintenance Jurisdiction number is displayed below the Secondary Route Number if the Maintenance Jurisdiction is different than the jurisdiction in the title of the report.
