

## District Bridge Scour Repair Multiple Locations King and Queen County Lancaster County Northumberland County Westmoreland County Notice of Willingness

**Find out** about a proposed bridge maintenance project to improve the condition of several bridges in King and Queen, Lancaster, Northumberland, and Westmoreland counties.

Crews will address scour, which is erosion of soil around a bridge's foundation. Once the project is awarded, the selected contractor will develop a schedule to repair four bridges, listed below. As work is finished at each location, the contractor will move to the next bridge in need of repair.

While work is underway, the contractor will either close the road and bridge to through traffic with a posted detour, install a single lane closure, or install a single lane closure with one-way, alternating traffic controlled by a temporary traffic signal. Each bridge repair is estimated to take 4-6 weeks to complete. Specific dates for road and bridge closures and/or lane closures will be determined once the project is awarded, and a detailed schedule is submitted.

The following bridges are proposed to be repaired with a detour in place:

- Route 621 (Bruington Road) over Dickeys Swamp, King and Queen County
- Route 601 (Bush Mill Road) over Bush Mill Creek, Northumberland County

The following bridge is proposed to be repaired with a single lane closure in place:

- Route 3 (Mary Ball Road) over Camps Prong, Lancaster County

The following bridge is proposed to be repaired with a single lane closure and a temporary traffic signal in place:

- Route 205 (Ridge Road) over Branch of Rosier Creek, Westmoreland County

For more information on this project and to view the proposed detour routes, visit:
